概况 Profile

艾坦姆流体控制技术（北京）有限公司作为中国控制阀领域崛起的新星，已经走在了同行业的前列。在公司 UTM 系列高品质控制阀的基础上，通过多年调节阀的生产、制造和现场安装、调试经验，艾坦姆公司设计、研发团队与世界知名美国软件技术开发公司共同推出艾坦姆公司自己的定位器——U529 系列智能定位器。

As a new rising Star, Utmost Flow Control Tech.(Beijing) has been going in the forefront of the control valve industry. Now Utmost successfully developed our own smart positioner——U529 series smart positioner based on present high-quality control valve through years' experiences of manufacturing, installation and commissioning for control valves and positioners with a world famous American software technology development company.

做中国人自己的高端调节阀，艾坦姆 529 系列定位器采用先进的微处理及智能测控技术、基于 3/3 滑阀式喷嘴挡板和电磁阀技术，产品具备单双作用、Hart、远传、隔爆、防爆功能，中美联合开发，通过严酷工况验证，已经达到了良好的使用效果。

Made Chinese its own high-quality control valve, Utmost U529 series smart positioner adopt the newest advanced micro processing and intelligent measurement and control technology ,based on 3 / 3 slide nozzle baffle valve and solenoid valve technology, with single and double acting, Hart, remote transmission, flameproof, explosion-proof function,developed by China and the United States R&D team, verified under the harsh operation conditions, has achieved good performance.

技术原理:

Technology principle:

U529 系列智能定位器打破传统的压力平衡原理，采用世界前沿的电平衡（数字平衡）原理技术，将电控指令转化成气动定位增量实现阀位控制；利用数字式开、停、关的信号来驱动气动执行机构；阀位反馈信号直接通过高精度的位置传感器实现电 / 气转换功能。

U529 系列定位器基于定位器微处理器将接受的 DCS 输出的 4~20mA 的电流信号转换成电气输出信号，在线进行智能组态和参数设置，实现对阀门进行精确控制。

U529 series smart positioner adopt the world's leading edge of electric balance (digital balance) principle, the electronic control instruction into pneumatic positioning incremental valve position control, which break the traditional pressure balance principle; according the digital signal to open, stop, off to drive pneumatic actuator; valve position feedback signal directly through high precision position sensor to achieve power / gas conversion function.

U529 series positioner based on the microprocessor of the positioner to accept the DCS output of the 4-20mA signal into electrical output signal, online intelligent configuration and parameter settings, to achieve the valve precise control.

定位器 CPU 接受 4~20 mA 的设定信号与阀位传感器反馈的实际阀位值进行比较，并根据检测到的偏差的大小和方向输出一个电控指令（PWM 数字方式）传送给喷嘴挡板的 I/P 控制单元，以此达到对执行机构进气量的调节，也就是说控制阀将控制指令转换为气动唯一增量。

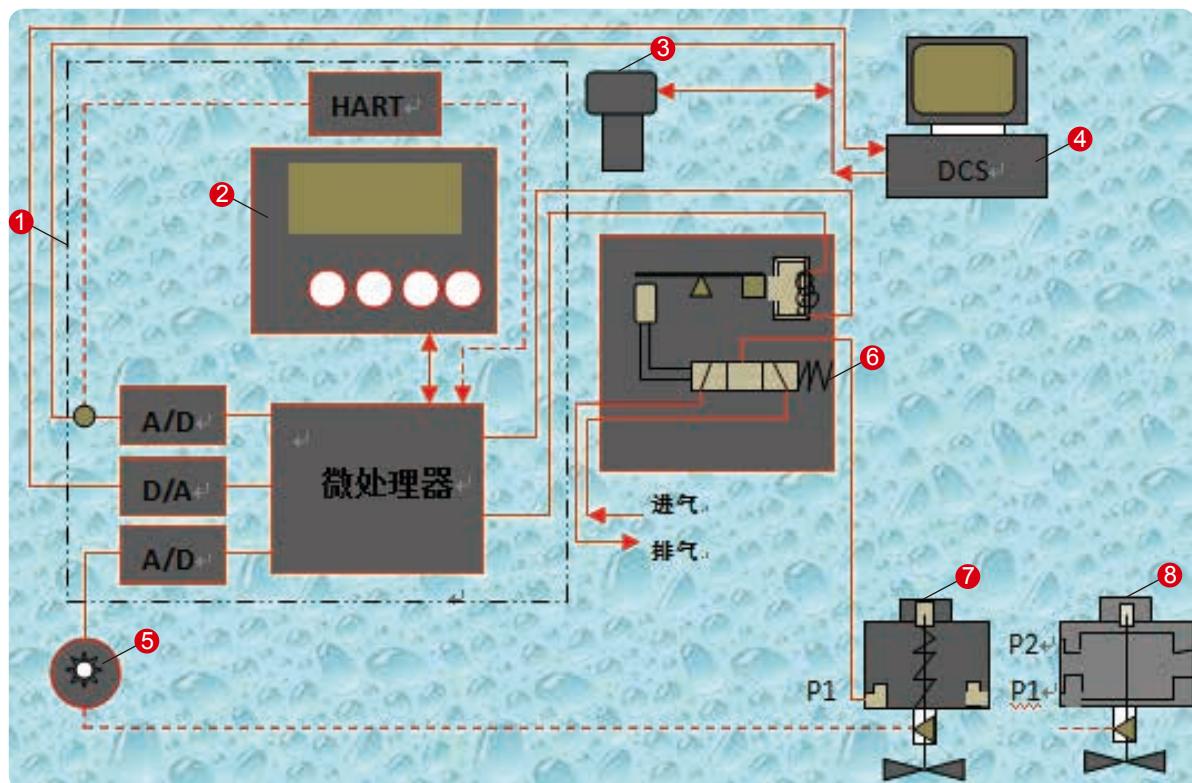

艾坦姆 U529 系列电气定位器

Utmost U529 Smart Positioner

By accept 4~20 mA setting signal the positioner CPU can compare the valve position sensor feedback actual valve position value and to the size and direction of the detection of the output of an electric control instruction (PWM digital mode) transfer to the nozzle baffle I/P control unit, to achieve the actuator air flow adjustment, which means the control valve is controlled by the change of gas flow as the only incremental.

当实际阀位与设定值偏差较大时（高速区），定位器输出一个连续信号；如果偏差不大（低速区），定位器将输出脉冲信号；当偏差很小时（自适应或可调死区内），则没有信号输出，此时实际阀门位置达到设定值，执行机构处于平衡状态，即一定量的设定电流对应一定的阀门位置。

The positioned will output a continuous signal while the actual valve position and the setting value with large deviation (the high speed area), locator output a continuous signal; if the deviation is not so large (low speed area), meanwhile the positioner will output pulse signal; when the deviation is very small (adaptive or adjustable dead time), there will be no signal output, at this time the actual valve position reach to set the value, the actuator stay in balance, that is, a certain amount of current corresponding to a fixed valve position.

U529 系列智能定位器特点 U529 Smart positioner Features

- 单、双作用;
Single/Double acting;
- 采用滑阀式喷嘴挡板结合 IP 模块结构，大大增强了其对仪表气源适应性和抗污能力（水份、粉尘、油污）；
Greatly enhanced the instrument air adaptability and anti fouling ability(water, dust and oil), with Nozzle baffle I/P structure;
- 可随意设定阀门流量特性（线性、快开、等百分比），方便阀门控制;
Valve flow characteristics can be free setting (linear, quick opening, equal percentage,) and easy to control;
- LCD 液晶显示屏，定位器配备内置调试按按键，安全、可靠、实用;
Safe, reliable, practical with equipped with a built-in LCD screen and integrated debugging button;
- 快速自诊定（2-3 分钟内可完成定位器全行程自诊定）;
Fast self-diagnosis (2-3 minutes to complete the whole stroke);
- 内部模块化集成阀位变送器、限位开关等电气模块;
Valve position transmitter, limit switches and other internal electrical module can be integrated;
- Hart 通信模块，方便用户进行远程校验和阀门诊断;
Easily remote for valve checking and diagnosis with Hart communication module;
- 智能控制算法，调节精度高，可实现 0.1% 精度的阀位智能控制;
High adjustment precision, can realize the accuracy of 0.1% intelligent valve control with intelligent control algorithm;
- 定位可实现三断保位、和三断复位的功能;
Three valve termination and three fault reset function can be achieved;
- 低功耗（I/P 低功耗、定位器低耗气量 :25L/h）：
Low power consumption (25L/h I/P low power consumption, low air consumption: locator);
- 数据备份和存储功能，有效解决定位器在线更换、调试的难题;
Data backup and storage functions, effectively solve the problem of online replacement, debugging;
- 符合 IEC534(NAMUR)
Meet IEC534 (NAMUR);
